

Energy Services

Process

Once we understand local priorities, we equip entrepreneurs and micro-small and medium enterprises (MSMEs) with the appropriate technologies and business delivery mechanisms that best serve them while meeting identified community needs. Our Indian project portfolio consists of over 200 clean and renewable small-scale enterprises incorporating a variety of clean energy technologies including solar photovoltaics, biogas and liquefied petroleum gas (LPG), small-scale hydropower, and grid-connected and grid-hybrid electricity. In addition to facilitating access to these technologies, S3IDF offers hands-on business development training and mentorship and financial services.

How We Engage

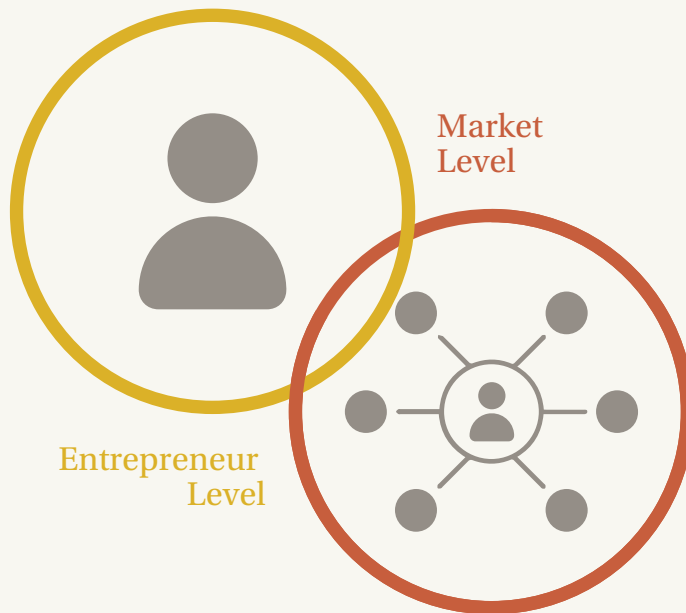

FINANCIAL ENGAGEMENT
Facilitate access to financial services through banks and other FIs

BUSINESS DEVELOPMENT
Provide training to build capacity & improve daily operations

TECHNOLOGY SERVICES
Promote access, training and maintenance to appropriate technologies
